

# AEGIS AI/LLM Threat Analysis Overview

Evidence-grounded malicious app, device posture, and log analysis

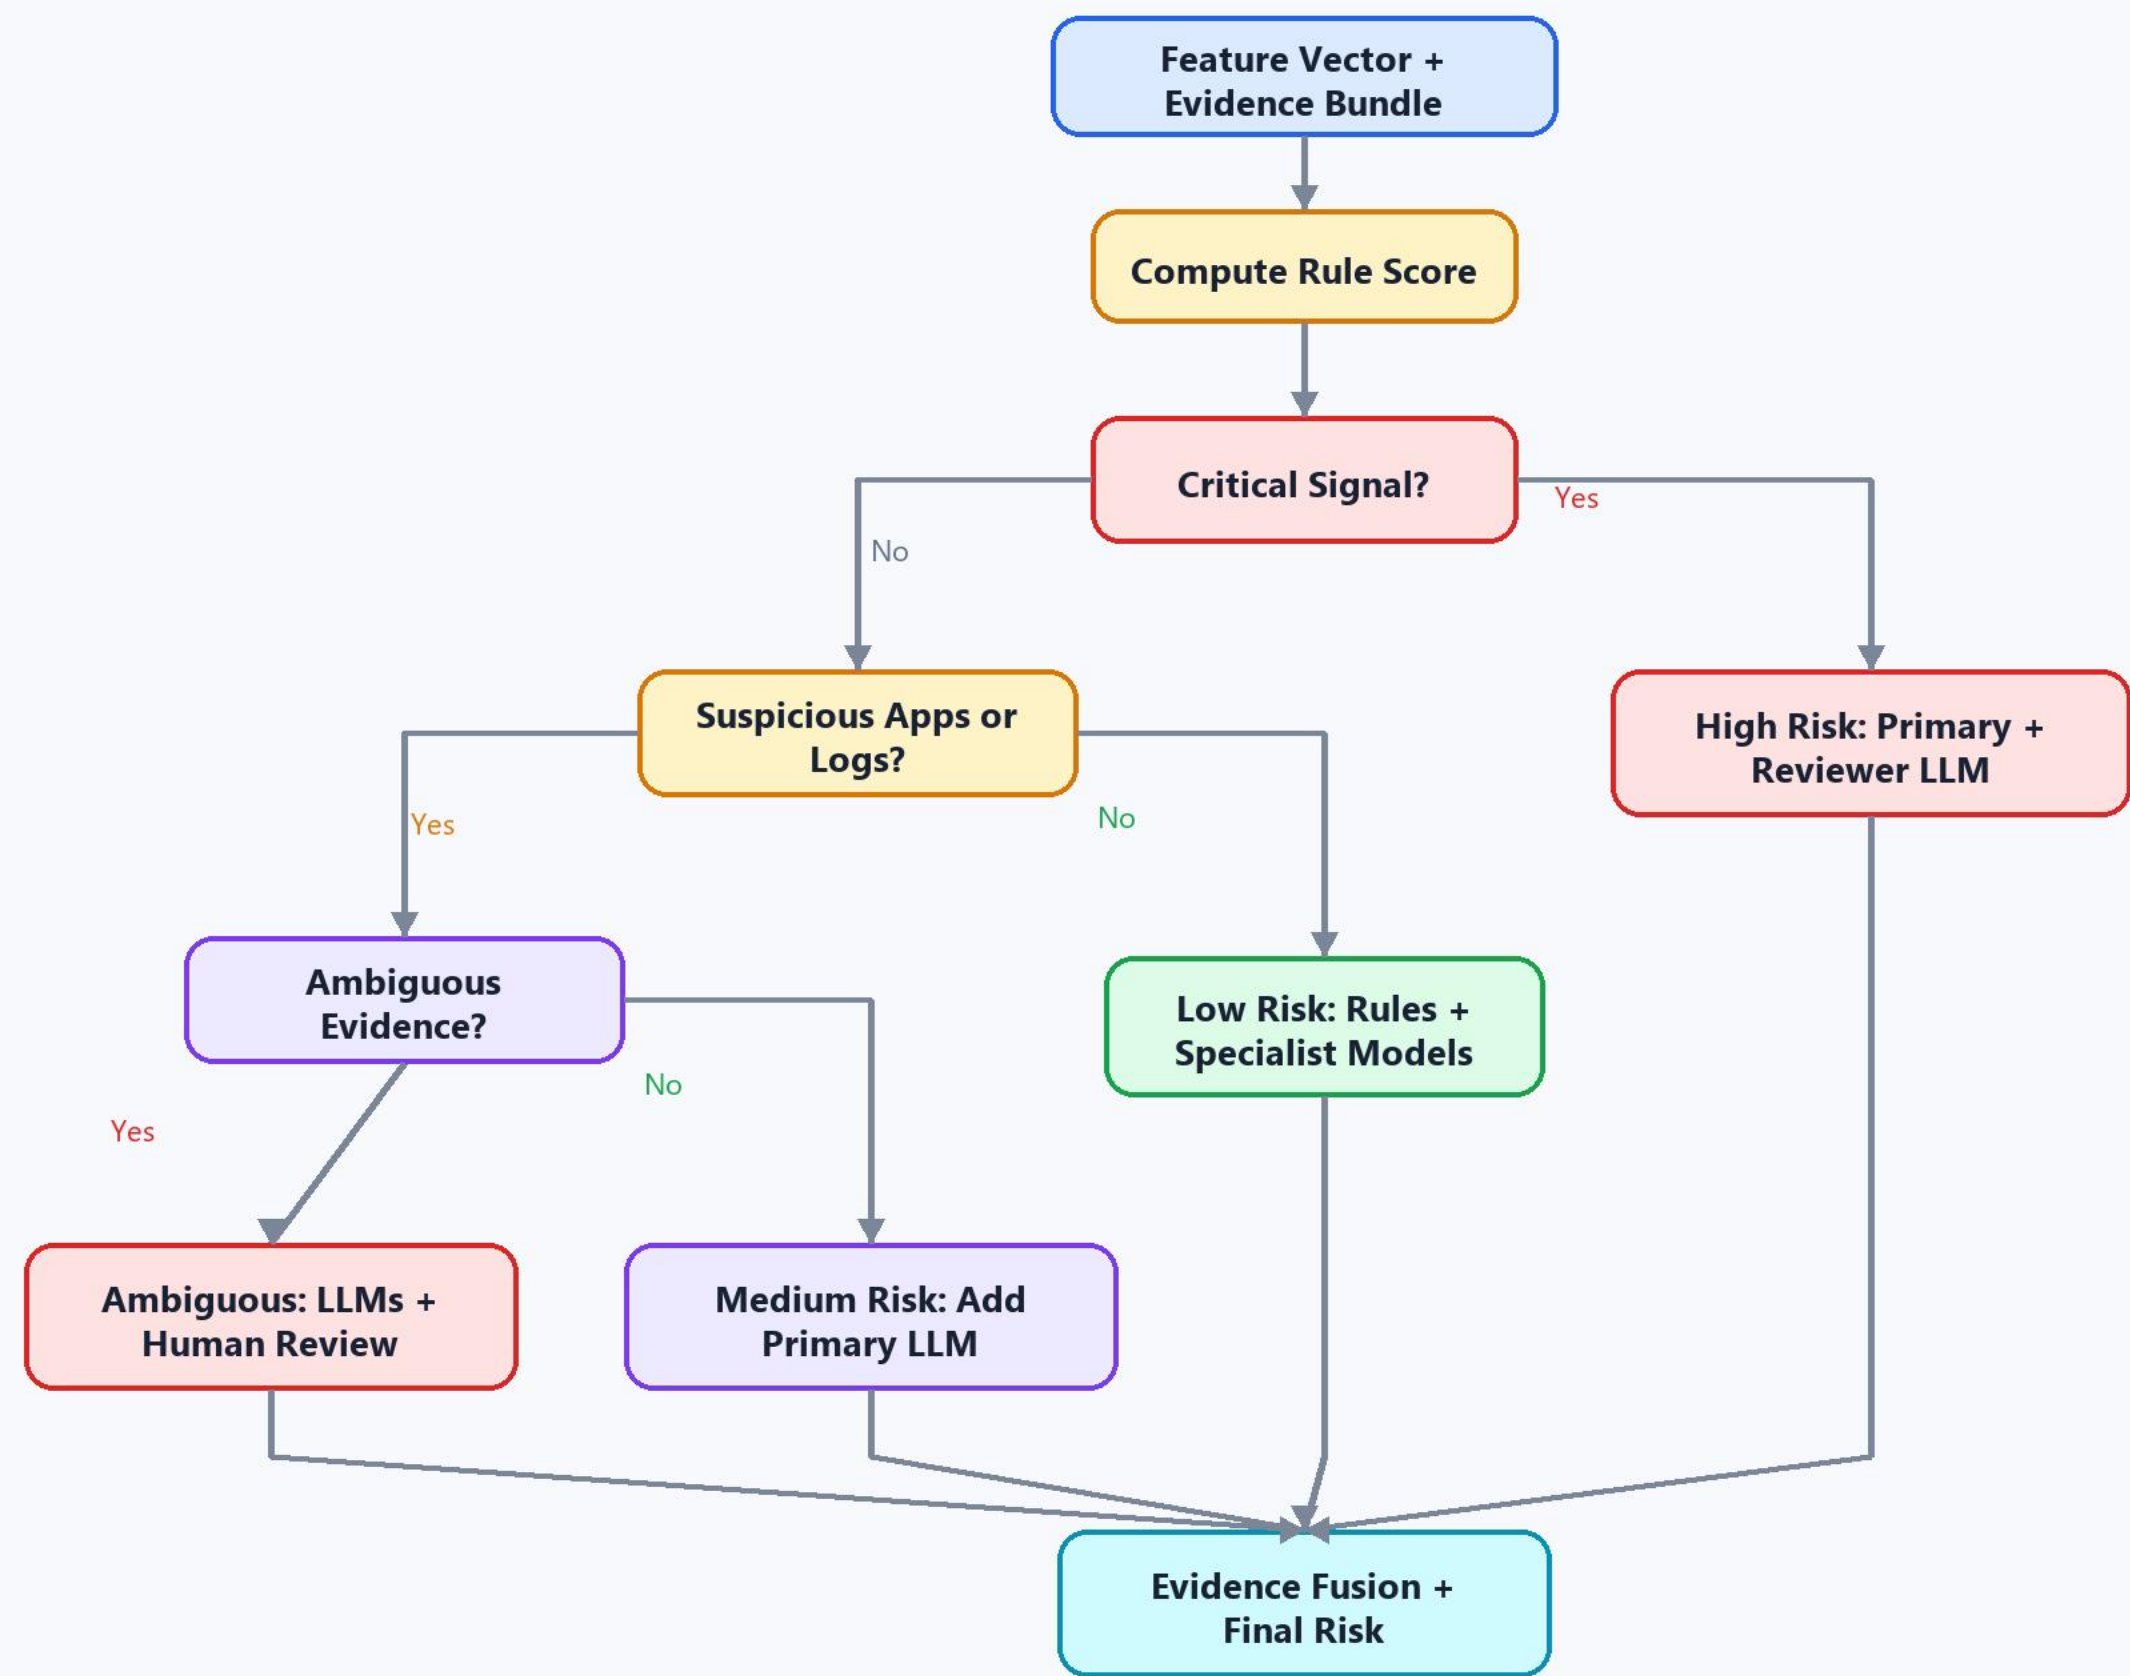

analysis pipeline

LLMs run after validation, redaction, enrichment, and feature extraction.

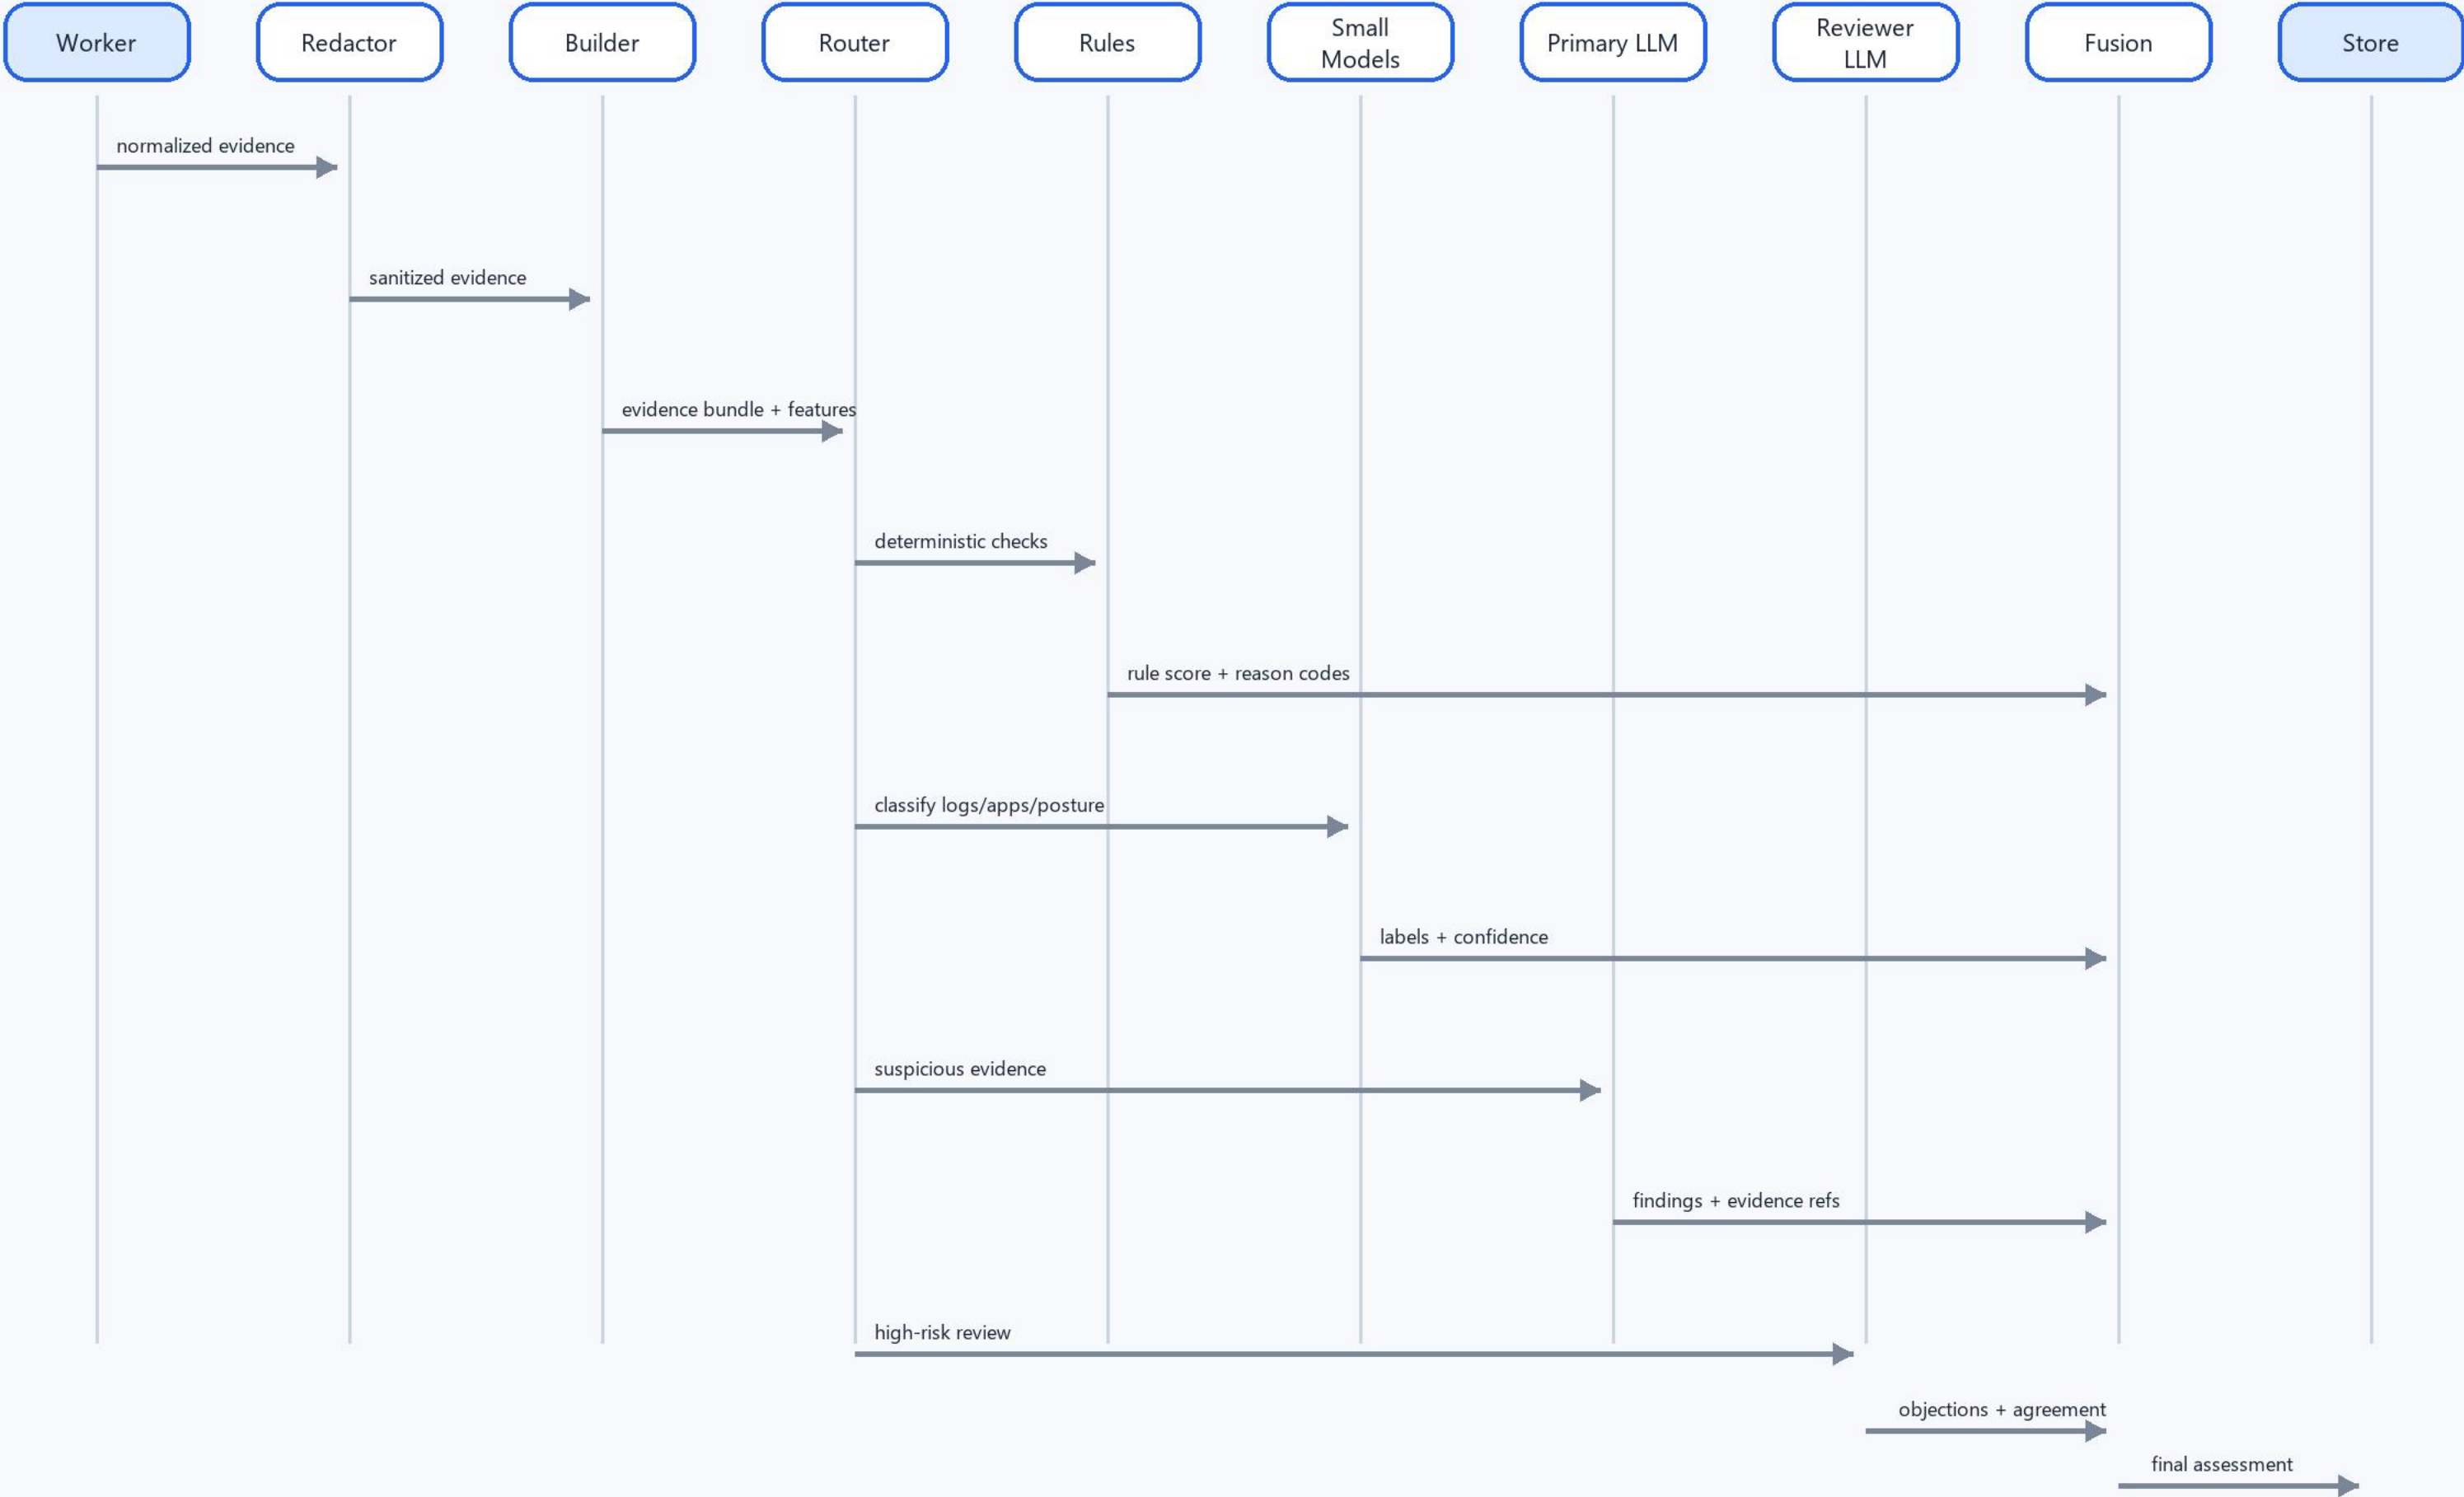

# Model Router Decision Chart

Choose the cheapest reliable model path for each telemetry payload

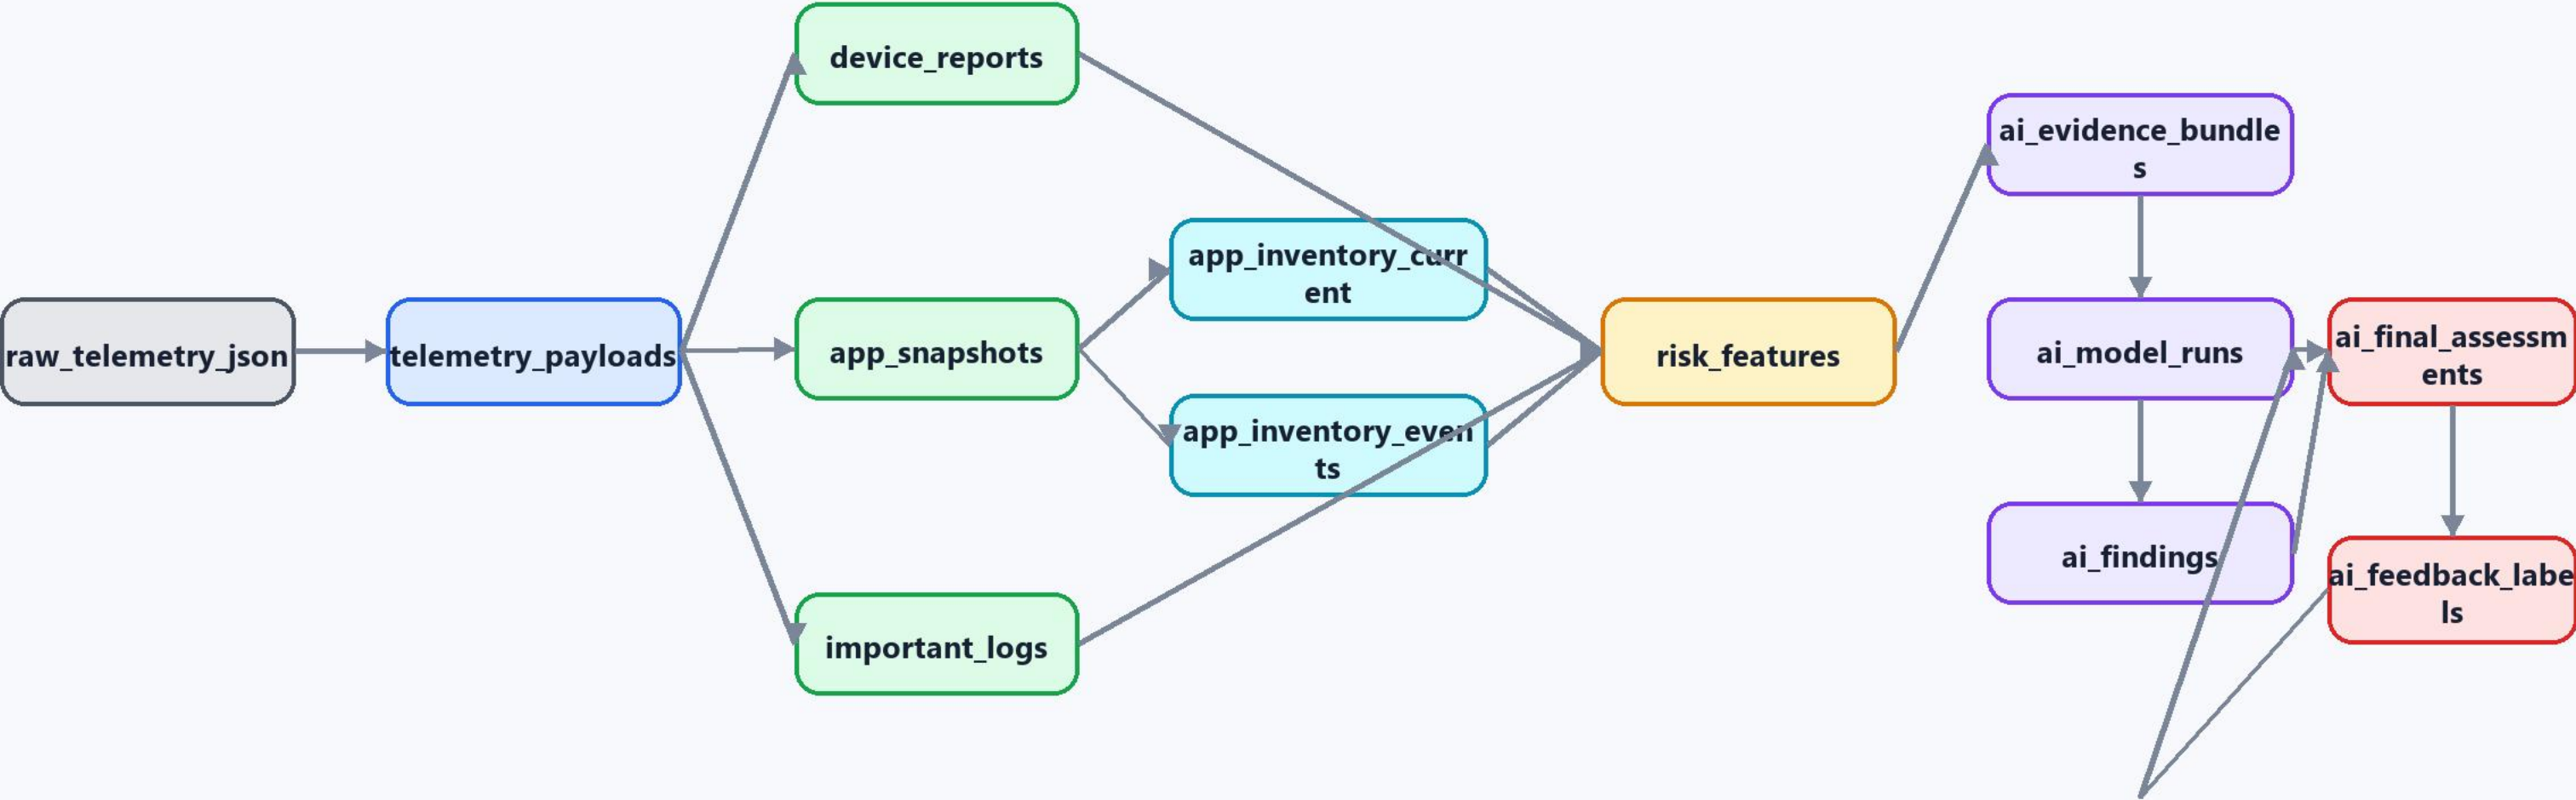

# AI Analysis Sequence

How one suspicious telemetry payload moves through the AI layer

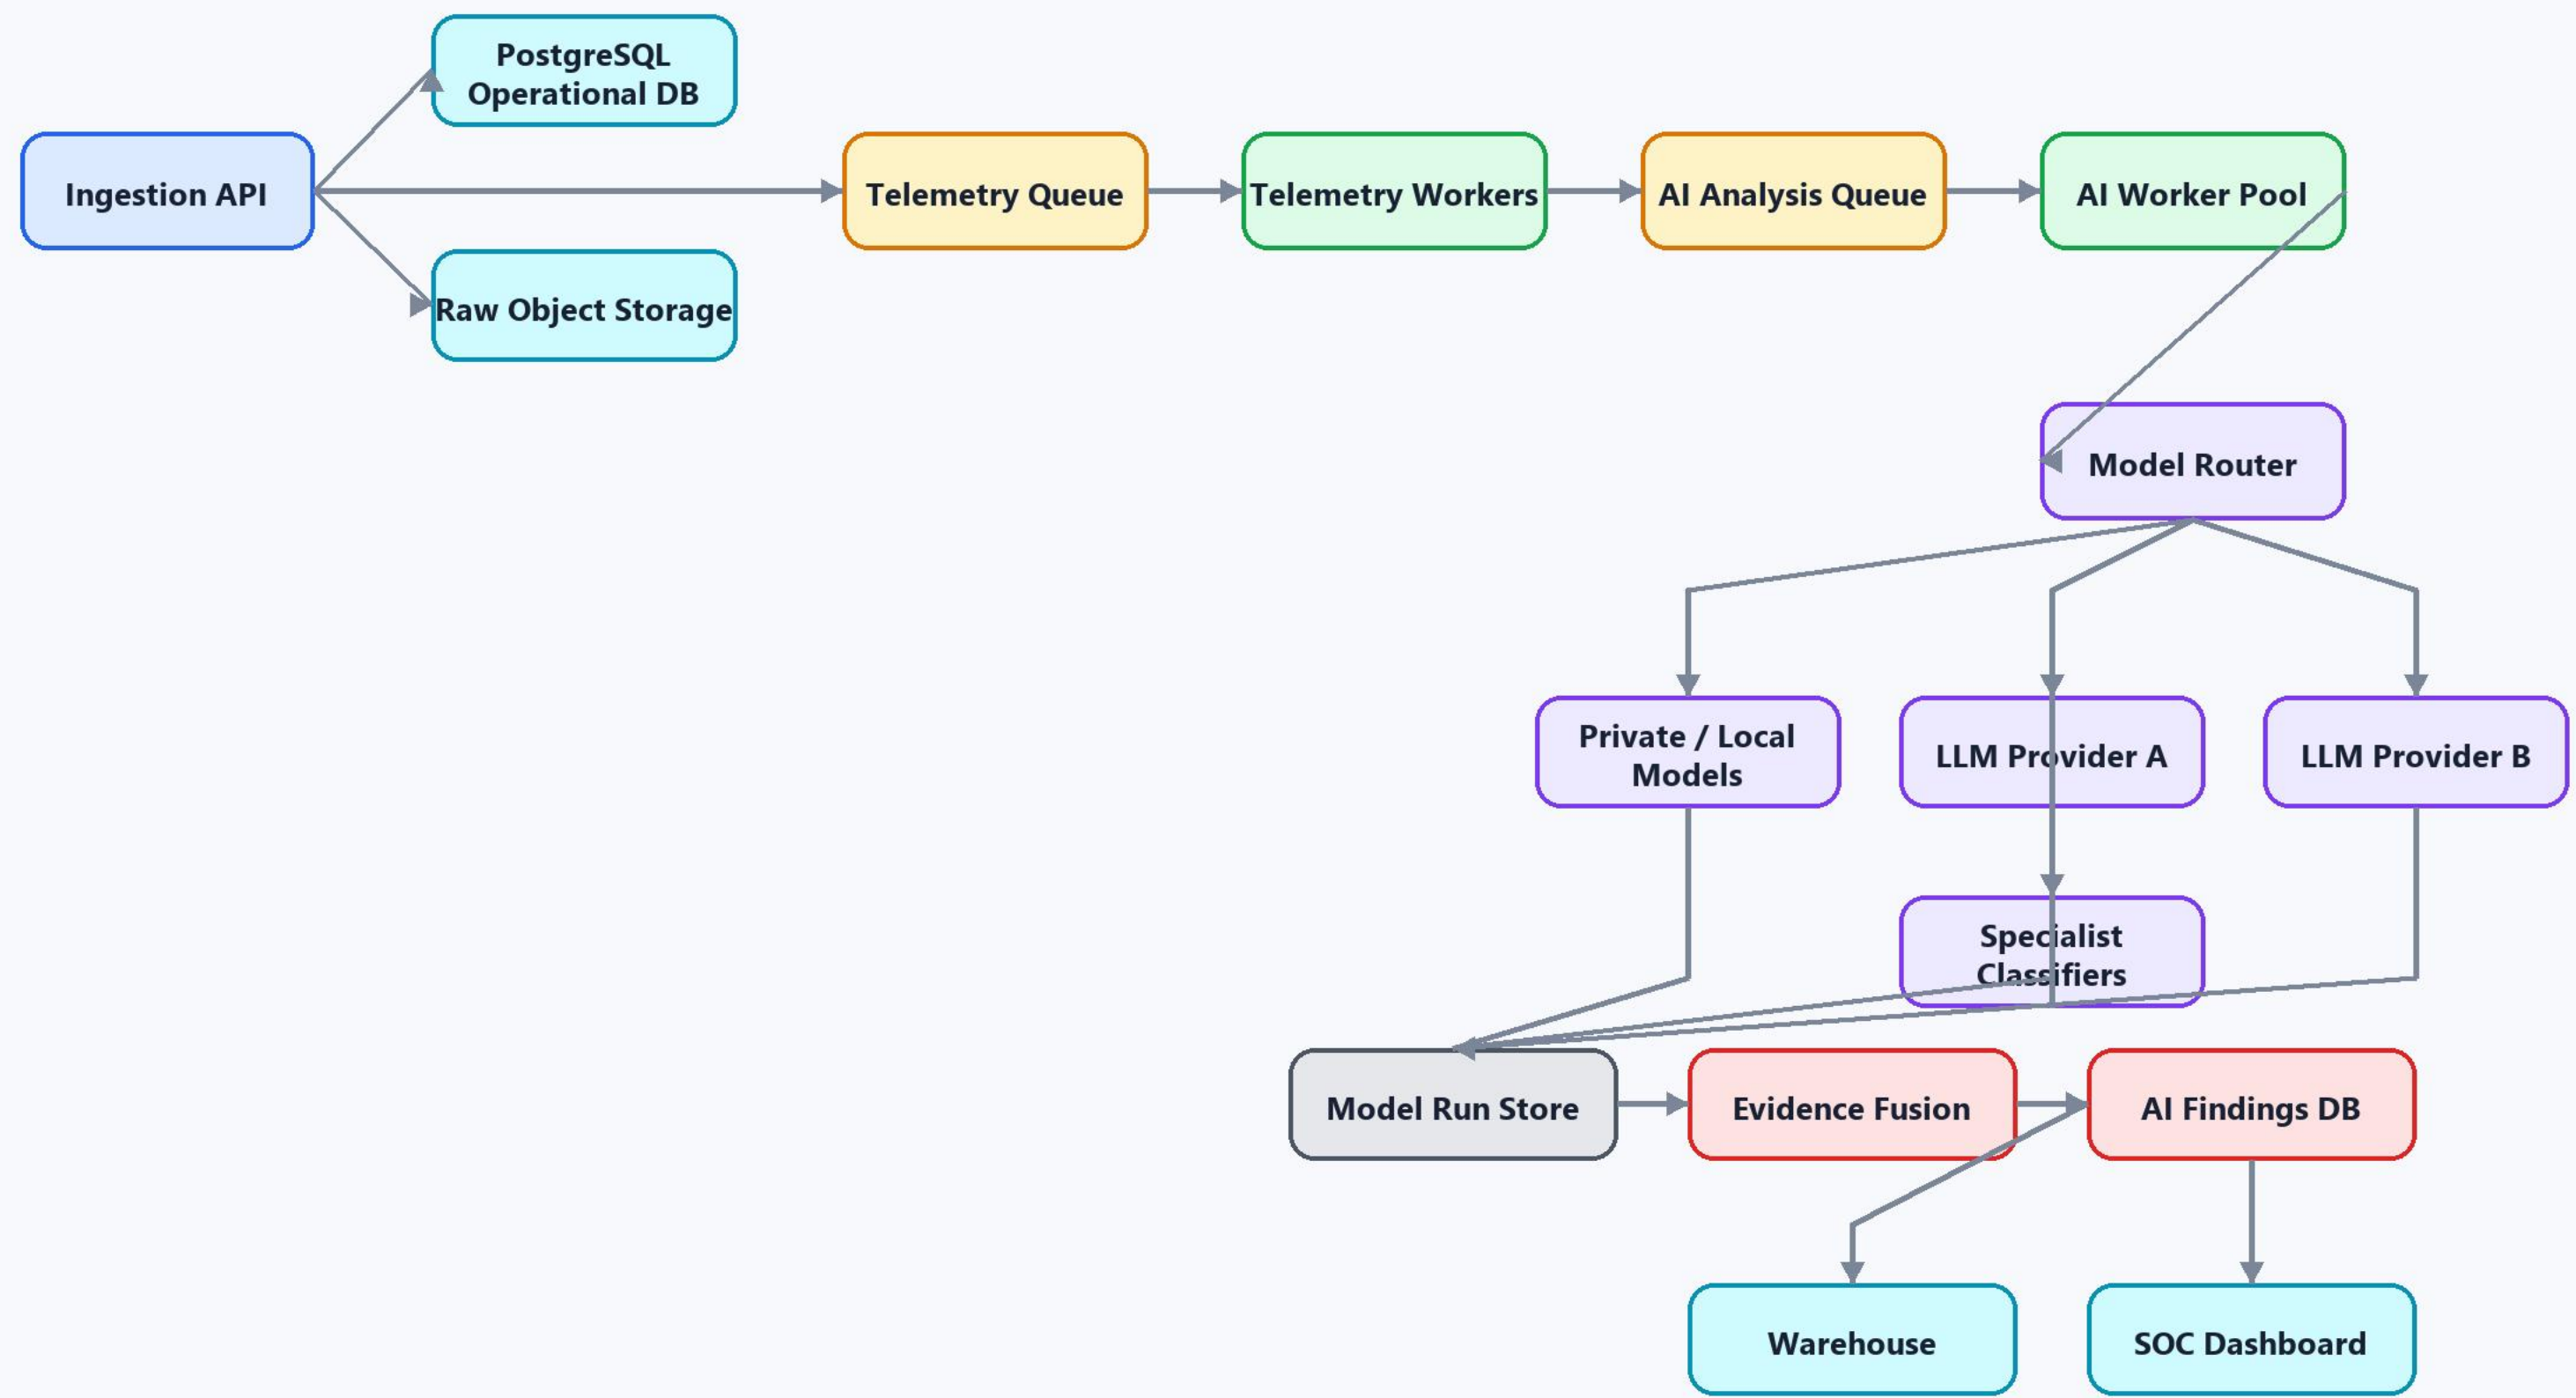

# Evidence And Storage Lineage

Trace every AI finding back to raw telemetry, features, model runs, and feedback

# AI Deployment Topology

Keep ingestion, telemetry processing, and model analysis independently scalable

# Human Review And Learning Loop

Analyst labels improve rules, prompts, models, and future routing decisions
